

Needfinding: ChoreMonster

User testing with Stacy Han- 1st time user

1. Buttons need to be less narrow, bigger, and further apart.
2. Button text needs to be more legible. The text is a lighter shade from the button color, making the text blend in, thus making it hard to read.
3. Ads take up good portion of the middle screen, making it very distracting.
Different placement or sizing should be considered.
4. Info and Settings buttons can be combined into one.
5. Preset chores cannot be edited. “Brush your teeth” for example, automatically gives 5 points and will have to be approved everyday by the parent. “Cleaning your bedroom” is also another preset chore that gives 25 points, which some parents may want to increase or decrease.
6. Custom chores made by parent must have a set date, frequency, and time. Some chores, however, may be doable at anytime, thus having to input a time requirement in order to move forward may seem limiting.
7. User accidentally switched from viewing parents profile to child’s multiple times without knowing it. Changing the interface to a different color when on child view will make it clearer which profile the user is viewing.
8. Parents needs to be able to see all of the added children’s chores and points at once, perhaps in chart view when in overview screen.
9. In terms of visual hierarchy, “Your” profile should be above all the added children’s profile when in the side navigational view.
10. Long delay time when navigating through interface. Needs to be quick for this type of user (Parent with not so much time and children with not so much patience).

Stacy Han using ChoreMonster for the first time!
